Long Press Options: In Long press Options If data come from the Api then options text will be highlight means text will be in white color if data don't come from the Api then text will be any dull color.

Explore Category Page: Explore Category is also same like a dashboard also there's an long press options show on hold category in explore the Api will be used is (Explore-Category).

For Business Details: Business Details Appear when user click on category in dashboard it'll navigate to the Business Details Page for this Api will be used is (Get-Business-Details-By-Business-Id).

Important Notes:

- Loader will be true by default in Dashboard (home page).
- On search page there's a filter on category in which user can also search multiple categories at once.
- On search by default sorting will be lying on rating.
- On search page lazy loading will be apply.
- On category and sub category lazy loading not apply.
- On Dashboard lazy loading will be apply.
- On Explore Category lazy loading will be apply.
- On Favorite lazy loading will be apply.
- We don't discuss about setting page as sir sumair said we don't need to discuss about setting right now.
- We also discussed that on Business details page we have all the data comes from the backend side also Right now we don't need to show side button which is appear on "What We Offer".
